Edwards Signaling

Product Guide

Fire alarm solutions

for small and mid-size buildings

EDWARDS Life Safety

Fire Control Panels

Intelligent Control

Edwards life safety systems are a powerful intelligent solution for small to mid-sized buildings. The Edwards family includes intelligent addressable and conventional fire alarm control systems. A full line of remote annunciators, modules and accessories are available for both intelligent/addressable and conventional panels. Advanced technology delivers the benefits of flexible system installation, while a clean and easy-to-operatate user interface makes panel operation and system maintenance quick and intuitive.

Flexibility built right in

Edwards programming features allow the system designer to customize powerful built-in features to precisely suit the needs of each building.

Intuitive software

The Edwards FSA-CU Configuration Utility is a windows based program used to configure system operation for the Edwards E-FSC conventional and E-FSA addressable systems. The program can communicate remotely with a 56K Modem and optional DACT installed in the panel. It also can communicate with the addressable panels over RS-232 or Ethernet with optional modules. When used with the addressable panels, the Configuration Utility provides access to extensive reports and diagnostic tools. These reports and tools can be accessed remotely over the DACT or Ethernet modules.

Signals with a difference

Edwards NACs are configurable to fully support the advanced signaling technology of Genesis notification appliances. These devices offer precision synchronization of strobes to UL 1971 standards. For Genesis devices, enabling this feature allows connected horns to be silenced while strobes on the same two-wire circuit continue to flash until the panel is reset.

Clear-cut remote annunciation

Remote annunciation is a strong suit of Edwards intelligent panels. Up to eight annunciators can be installed on a single addressable system. Compatible annunciators include a range of LED and LCD models that provide zone or point annunciation, as well as common control capabilities.

Edwards also supports graphic annunciation with optional Graphic Annunicator Interface (GCI) modules. Each interface provides common control, indicators, and 32 LEDS.

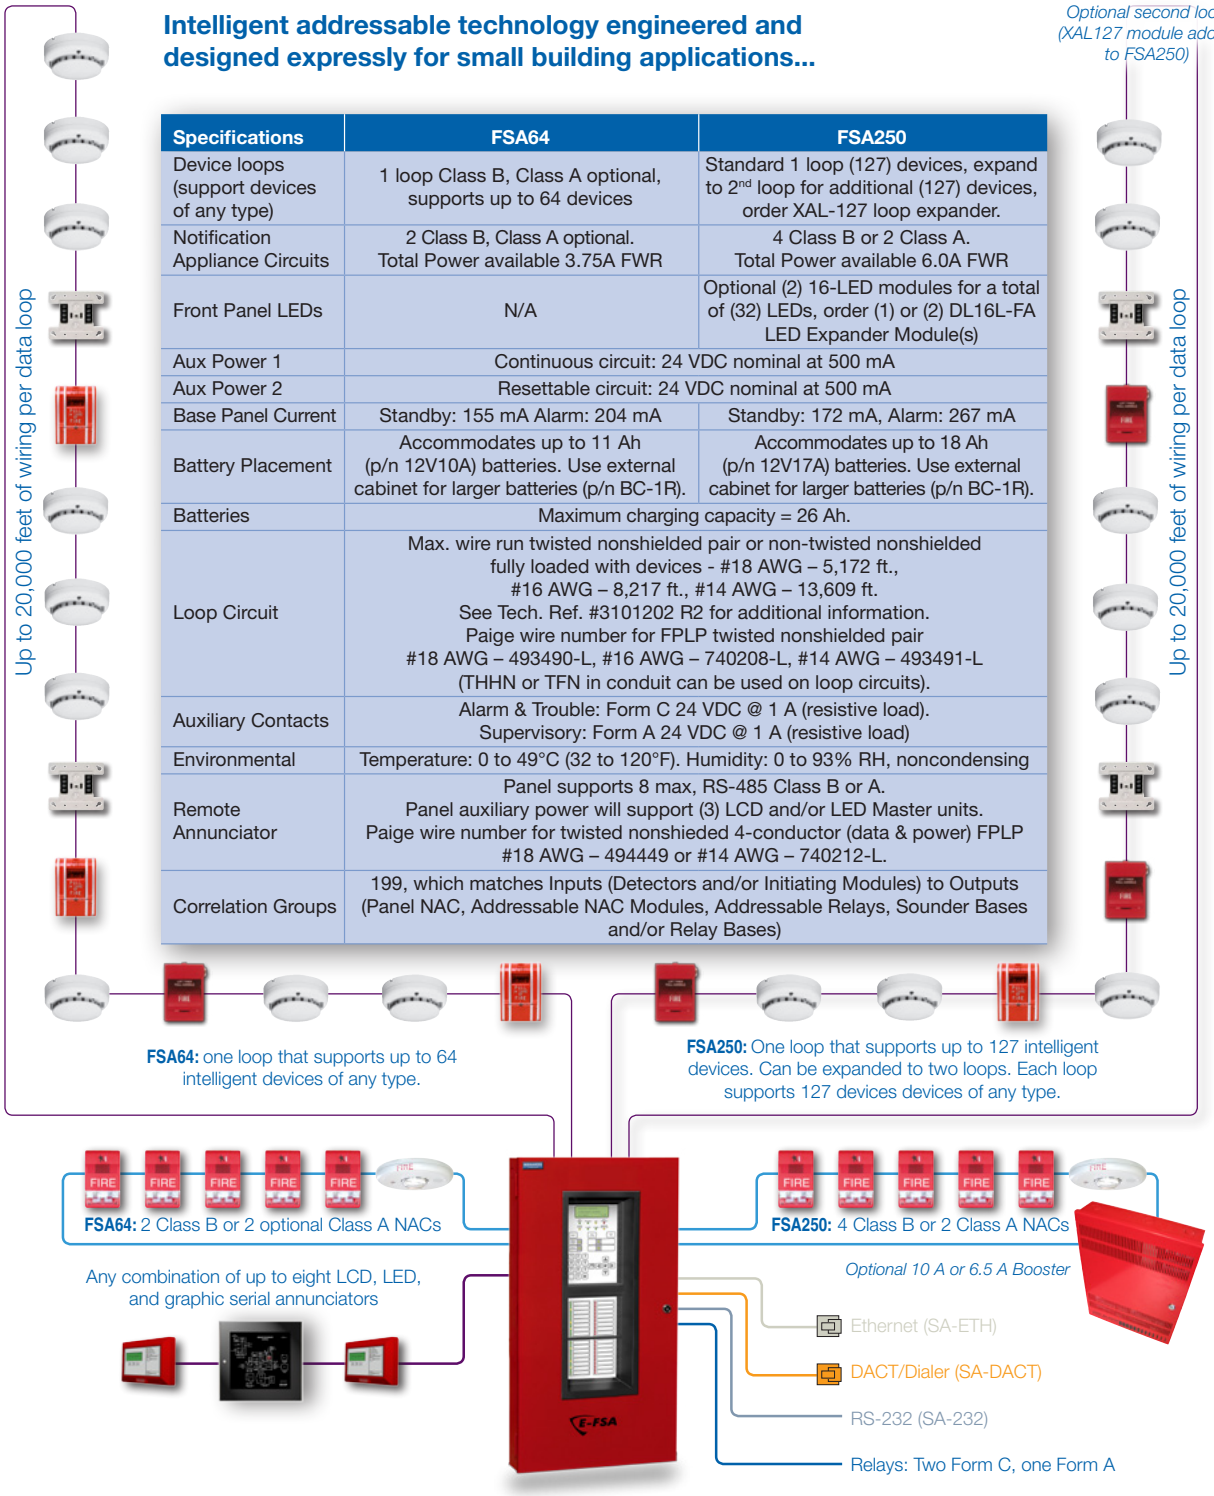
A complete line of accessories

Edwards fire and life safety systems are supported by a complete line of detectors, modules and related equipment, each of which is fully tuned and tested to operate in concert with one another to provide highly reliable service and years of trouble-free operation.

Specifications

Intelligent addressable technology engineered and designed expressly for small building applications...

Specifications	FSA64	FSA250
Device loops (support devices of any type)	1 loop Class B, Class A optional, supports up to 64 devices	Standard 1 loop (127) devices, expand to 2nd loop for additional (127) devices, order XAL-127 loop expander.
Notification Appliance Circuits	2 Class B, Class A optional. Total Power available 3.75A FWR	4 Class B or 2 Class A. Total Power available 6.0A FWR
Front Panel LEDs	N/A	Optional (2) 16-LED modules for a total of (32) LEDs, order (1) or (2) DL16L-FA LED Expander Module(s)
Aux Power 1	Continuous circuit: 24 VDC nominal at 500 mA	
Aux Power 2	Resettable circuit: 24 VDC nominal at 500 mA	
Base Panel Current	Standby: 155 mA Alarm: 204 mA	Standby: 172 mA, Alarm: 267 mA
Battery Placement	Accommodates up to 11 Ah (p/n 12V10A) batteries. Use external cabinet for larger batteries (p/n BC-1R).	Accommodates up to 18 Ah (p/n 12V17A) batteries. Use external cabinet for larger batteries (p/n BC-1R).
Batteries	Maximum charging capacity = 26 Ah.	
Loop Circuit	Max. wire run twisted nonshielded pair or non-twisted nonshielded fully loaded with devices - #18 AWG – 5,172 ft., #16 AWG – 8,217 ft., #14 AWG – 13,609 ft. See Tech. Ref. #3101202 R2 for additional information. Paige wire number for FPLP twisted nonshielded pair #18 AWG – 493490-L, #16 AWG – 740208-L, #14 AWG – 493491-L (THHN or TFN in conduit can be used on loop circuits).	
Auxiliary Contacts	Alarm & Trouble: Form C 24 VDC @ 1 A (resistive load). Supervisory: Form A 24 VDC @ 1 A (resistive load)	
Environmental	Temperature: 0 to 49°C (32 to 120°F). Humidity: 0 to 93% RH, noncondensing	
Remote Annunciator	Panel supports 8 max, RS-485 Class B or A. Panel auxiliary power will support (3) LCD and/or LED Master units. Paige wire number for twisted nonshieded 4-conductor (data & power) FPLP #18 AWG – 494449 or #14 AWG – 740212-L.	
Correlation Groups	199, which matches Inputs (Detectors and/or Initiating Modules) to Outputs (Panel NAC, Addressable NAC Modules, Addressable Relays, Sounder Bases and/or Relay Bases)	



Intelligent Addressable Control Panels

E-FSA250R E-FSA64

Advanced intelligent addressable technology delivers the benefits of flexible system installation, while a clean and easy-to-operatate user interface makes panel operation and system maintenance quick and intuitive.

The Edwards family of intelligent components also offers contractors and installers simple setup and installation, while delivering options that take full advantage of intelligent fire alarm processing. With a microprocessor in each device, intelligence is distributed throughout the system so that command decisions are made at the individual module, rather than bottlenecking at the control panel.

This not only speeds event processing, it also makes a more robust and reliable system – so robust, in fact, that when upgrading from a conventional panel to an Edwards intelligent system, you can usually use existing wiring – no twisted or shielded cable required!

Standard Features

The attractive appearance of Edwards control panels fits in any decor. Controls are discreetly inset behind the window.

- Sized to fit your needs: E-FSA64 - 64 points or E-FSA254 - 127 points. Expandable to 254 points.
- Supports up to eight serial annunciators, LCD, LED, and graphic interface
- 4 x 20 character, backlit LCD display, with event details display
- User interface includes two programmable switches with LEDs and custom labeling
- Class B or A SLC standard on both E-FSA64 and E-FSA250
- Class B or A NAC and annunciator wiring on E-FSA250 panels, optional on E-FSA64
- WireSaver feature enables use of existing or new solid or stranded fire wire, (up to 20K ft.)
- Form C contacts for alarm and trouble, Form A for supervisory
- Optional RS-232 printer/programming port
- Supports horn silence over two wires and UL 1971-compliant strobe synchronization with Genesis low profile notification appliances
- Fast ground-fault diagnostic mode
- Supports intelligent modules, pull stations, detectors,
- Programmable duct detector relay, sounder and relay bases
- Rotary addressing on all intelligent addressable devices
- Detailed module personality codes simplify programming
- Access panel programming and diagnostics locally or remotely via phone or IP
- Remote program read in any panel state
- Automatic drift compensation and two-level CleanMe® maintenance alert reporting on spot and duct detectors
- Detector Sensitivity level, alarm verification, and pre alarm set by point
- Day/Night sensitivity detector adjustment
- PinPoint enhanced ground-fault identification by circuit and module

Intelligent Single Loop Systems, Edwards data sheet number S85005-0131

E-FSA64*D	Fire Alarm Control Panel, Intelligent/Addressable, 64 Points, w/U/D Dialer, 24VDC
E-FSA64*	Fire Alarm Control Panel, Intelligent/Addressable, 64 Points, 24VDC
SA-TRIM1	Fire Alarm Control Accessory, Semi-Flush Mt., Trim Kit, E-FSA64*

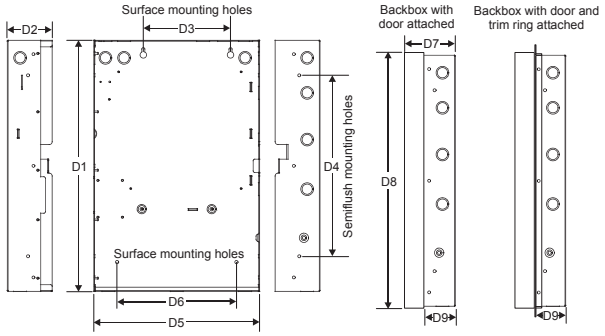
Intelligent Two-Loop Systems, Edwards data sheet number S85005-0130

E-FSA250*D	Fire Alarm Control Panel, Intelligent/Addressable, 127 Standard up to 254 Points, w/U/D Dialer
E-FSA250*	Fire Alarm Control Panel, Intelligent/Addressable, 127 Standard up to 254 Points
D16L-FA	Remote Annuciator, LED, 16-Zone, 2-LEDs per Zone
SA-TRIM2	Fire Alarm Control Accessory, Semi-Flush Mt., Trim Kit, E-FSA250*

Dimensions

Panel dimensions, in (cm)	D1*	D2	D3	D4	D5*	D6	D7	D8	D9
E-FSA64	21.50 (54.6)	3.85 (9.8)	7.5 (19)	15.5 (39.4)	14.25 (36.2)	10.25 (26)	3.9 (9.9)	21.7 (55.1)	2.7 (6.8)
E-FSA250	28.0 (71.1)	3.85 (9.8)	9.0 (22.8)	22.0 (55.8)	15.75 (40.0)	10.25 (26.0)	3.9 (9.9)	28.2 (71.6)	2.7 (6.8)

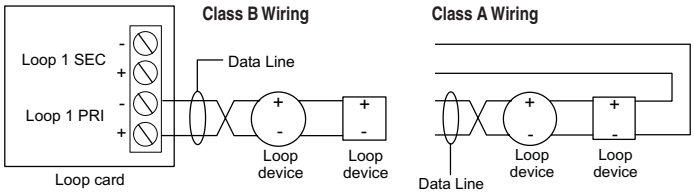
** Optional trim kits provide 3/4" frame on top, bottom and sides of enclosure.*



Option Cards

Edwards intelligent addressable panels are supported by a complete line of modules and related equipment that enhance performance and extend system capabilities. Option cards are easy to install and set up. They simply plug directly into the control panel main circuit board or are connected to it with a ribbon cable. After installation, terminals remain easily accessible for quick connection of field wiring. The cabinet provides ample room for wire routing, keeping wiring neat and easy to service at all times.

XAL127 Loop Expander Card

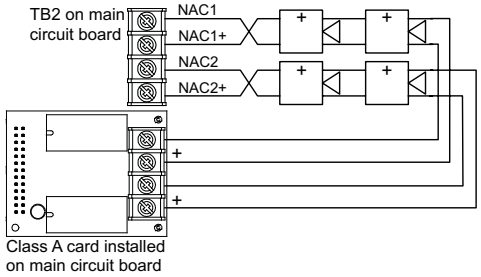


The XAL127 loop expander Card provides an additional device loop on the control panel. The card expands the control panel's device capacity to 254 total device addresses, 127 per loop. The card is compatible with Class B or Class A wiring. It is compatible with E-FSA250 control panels only. The loop expander card connects to connector J7 on the main circuit board.

The loop expander card connects to connector J7 on the main circuit board.

XAL127	**SLC Loop Expansion Module. Adds second loop toE-FSA250 systems, 254 pt capacity. Mounts in cabinet on main board.**	**Data Sheet S85005-0130**

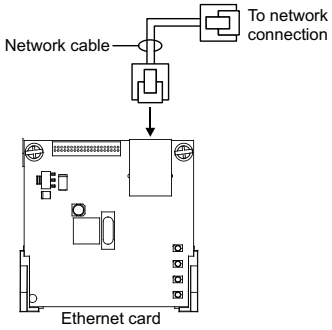
SA-CLA Class A Module



The SA-CLA card provides Class A capability for NAC and annunciator wiring. Its terminal block provides the wiring connection for NAC return wiring. The card is required for annunciator Class A wiring even though this wiring does not return to the SA-CLA card. The SA-CLA is compatible with E-FSA64 control panels only. E-FSA250 panels are Class A ready. The SA-CLA is installed directly to the control panel circuit board using its plastic standoffs and plug connection.

SA-CLA	**E-FSA64 Class A adapter module. Provides Class A capacity on NACs. Mounts in cabinet on main board.**	**Data Sheet S85005-0131**

SA-ETH Ethernet Interface Card

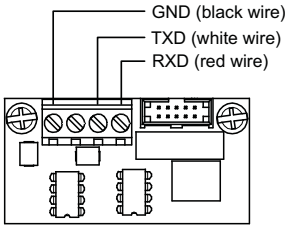


The SA-ETH card provides a standard 10/100 Base T Ethernet network connection for connecting to an intranet, a local network, or the Internet. The card can be used to upload and download panel configuration, history, and current status from the configuration utility to the panel over the network.

The Ethernet card is installed on the plastic assembly and connects to the main circuit board via a ribbon cable.

SA-ETH	**Ethernet Port for connection to local area networks. Mounts in cabinet on base plate.**	**Data Sheet S85005-0131**

SA-232 Serial Port (RS-232) interface

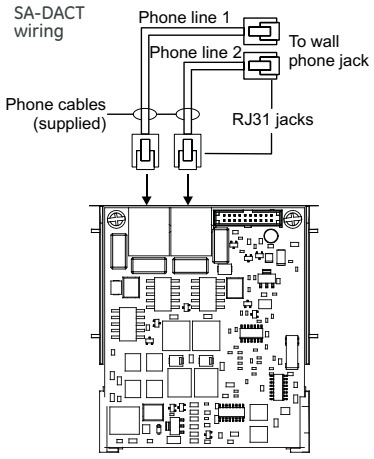


The SA-232 card provides an RS-232 interface with Edwards Intelligent Series panels. It can be used for connecting a printer to the control panel to print system events. The card also can be used for connecting a computer to download a configuration program from the configuration utility to the control panel.

The RS-232 card is installed on the plastic assembly and connects to the main circuit board via a ribbon cable.

SA-232	**Serial Port (RS-232), for connection to printers & computers, mounts in cabinet to base plate.**	**Data Sheet S85005-0131**
260097	**Upload/download cable from SA-232 card to PC, DB9 to wire leads**	

SA-DACT Upload/Download Dialer



The SA-DACT provides communications between the control panel and the central station over a telephone line system. It transmits system status changes (events) to a compatible digital alarm communicator receiver over the public switched telephone network. The dialer is capable of single, dual, or split reporting of events to two different account and telephone numbers. The modem feature of the SA-DACT can also be used for remotely uploading and downloading panel configuration, history, and current status to a PC running the configuration utility. The 56K DACT/Modem can be configured for dual-line, single-line, or modem operation only.

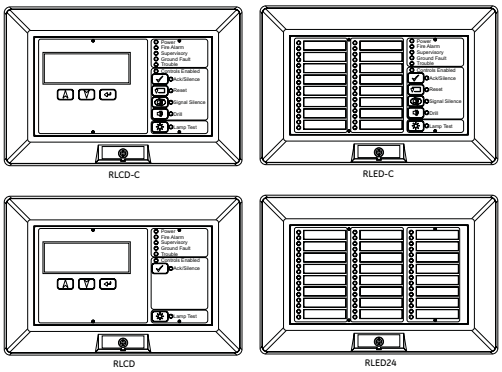
The dialer phone lines connect to connectors on the dialer's main circuit board. Phone line 1 connects to connector J4 and phone line 2 connects to connector J1. The SA-DACT includes two RJ-31X cords with plugs at each end.

Note: All Edwards intelligent addressable fire panels can be ordered with the SA-DACT upload/download dialer included by ordering a panel with a "D" in the part number.

SA-DACT	**Dual Line Dialer/Modem, supports Contact ID, mounts in cabinet on base plate**	**Data Sheet S85005-0131**

Remote Annunciation

R-Series Annunciators are high-performance remote annunciators that provide status indication and common controls for Edwards Intelligent Addressable fire alarm systems. This family of annunciators offers LCD or LED annunciation as well as a graphic annunciator driver. Models are available with and without common controls.



There are three R-Series annunciator models, plus an LED-based expander. Up to two expanders can be connected to any annunciator. The expander includes 24 pairs of LEDs that extend the capabilities of any of the annunciators.

All annunciator models include status LEDs and an internal buzzer. Two models have an LCD text display, and one has 16 pairs of LEDs for zone annunciation. LCD models feature a large back-lit, four by twenty character per line, super-twist liquid crystal display.

R-Series annunciators and expanders are mounted on a standard 4-inch square electrical box, using the included mounting ring. They can also be surface mounted in locking steel enclosures. Three different enclosures are available.

A keyswitch or locking enclosure are available for R-Series annunciator applications. The keyswitch enables or disables common controls. The key switch and locking enclosures limit access to the common controls to authorized personnel and may be required to meet NFPA requirements. The common controls on the E-RLCD-C can also be password protected.

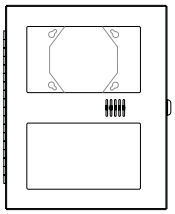
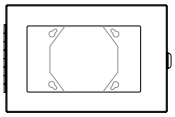
R Series Annunciator Enclosures and Accessories



RA-ENC2



RA-ENC1

The RA Remote Annunciator Enclosures provide secure, surface mounted protection for annunciators and extenders. Each consists of a back plate, hinged cover, and key lock. The enclosures are 16-gauge welded steel with a white, painted finish. Each enclosure includes a security lock and two keys. The two- and three-position enclosures have wiring channels for correct routing of interconnections. The enclosures attach to a standard electrical box, and provide a mounting lip that takes the place of the integral mounting ring supplied with the annunciators and expanders.

RA-ENC1	One-position enclosure for Remote Annunciator.	Data Sheet S85005-0128
RA-ENC2	Two-position enclosure for Remote Annunciator and one Remote Expander.	Data Sheet S85005-0128
RA-ENC3	Three-position enclosure for Remote Annunciator and two Remote Expanders.	Data Sheet S85005-0128
LSRA-SB	Surface Mount Box	Data Sheet S85005-0128

GCI Graphic Annunicator Driver

The Graphic Annunciator Driver is an interface card that connects the Edwards Intelligent control panel to the display panel of an LED-based graphic annunciator (sold separately). The annunciator card supports 32 LEDs on the graphic panel display (E-FSA250) and 16 on E-FSA64. It includes status LEDs and an internal buzzer. The graphic interface is supplied with snap track mounting. It is attached to a plastic mounting rail that requires two EIA panels. The annunciator communicates with the control panel on the RS-485 data riser. This can be configured for Class A or Class B communication. The annunciator does not provide ground fault isolation. It is a stand-alone unit that can be powered by the control panel or by an approved power supply.

GCI	Graphic Annunciator Driver (Graphic Annunciator not included)	Data Sheet S85005-0128

Conventional Panels & Accessories

The Edwards conventional fire alarm family consists of 3-, 5- and 10- zone fire alarm control panels (FACP), an optional integrated upload/download DACT (dialer), intelligent/analog type detector features, serial annunciator modules, and serial remote relay modules. All FACPs and components are UL 864 Listed to the 9th edition standard.

Edwards incorporates features designed to simplify installation, operation and maintenance. These include front panel programming, one person walk testing, and selectable IDC and NAC types. In addition, when used with CleanMe® -compatible conventional smoke detectors, Edwards provides analog type features such as remote maintenance alert and automatic drift compensation that helps reduce false alarms and simplifies maintenance calls.

Edwards conventional panels are powerful enough to meet the demands of today's installations while leaving plenty of room to grow in the future. They support Class A operation by combining pairs of on-board IDCs or NACs to provide the necessary Class A circuits (5 and 10 zone panels only). For example, the E-FSC1004D comes factory set to support 10 Class B IDCs and 4 NACs. But it can be field-configured to provide 5 Class A IDCs (no Class B IDCs), and 2 Class A NACs – or any other combination of circuits that fall within the circuit-pairing parameters. Additionally, the E-FSC1004 10 zone panel can be expanded to 7.0 amps of signal power with the addition of an F-XTR120 transformer.

	E-FSC1004	E-FSC502	E-FSC302
Class B IDCs	Up to 10	Up to 5	3
Class A IDCs	Up to 5	Up to 2	0
Class B NACs	Up to 4	Up to 2	2
Class A NACs	Up to 2	1	0
NAC Power	7.0 amps	3.5 amps	3.5 amps
Auxiliary power	0.5 amps	0.5 amps	0.5 amps

Notes: Class A operation will reduce the number of available Class B IDCs and/or NACs, depending on the panel configuration. NAC power for E-FSC1004 is 3.5, expandable to 7.0 with optional F-XTR120. See catalog sheet S85005-0126 for details.

Conventional Fire Alarm Panels, Data Sheet S85005-0126

E-FSC302*D	**Conventional Fire Alarm Control Panel with upload/download dialer – 3 Class B IDCs; 2 Class B NACs; 3.5A NAC power (Pairs of IDCs and NACs convertible to single Class A circuits); 120 Vac**
E-FSC502*D	**Conventional Fire Alarm Control Panel with upload/download dialer – 5 Class B IDCs; 2 Class B NACs; 3.5A NAC power (Pairs of IDCs and NACs convertible to single Class A circuits); 120 Vac**
E-FSC1004*D	**Conventional Fire Alarm Control Panel with upload/download dialer – 10 Class B IDCs; 4 Class B NACs; 7.5A NAC power (Pairs of IDCs and NACs convertible to single Class A circuits); 120 Vac**

Note: Remove "D" from part number to order panels without UD dialer. UD dialer also sold separately under part number F-DACT.
* Indicate color with G for gray, R for red, i.e. E-FSC302GD, E-FSC1004R, etc.

Semi-flush Trim Rings (for recessed mounting)

F-TRIM35*	**Semi-flush trim for E-FSC302* and E-FSC502* (* specify R for red, G for gray, i.e. F-TRIM35G)**
F-TRIM10*	**Semi-flush trim ring for E-FSC1004*D (* specify R for red, G for gray, i.e. F-TRIM10RD)**

End of Line Resistor (Options & replacements) (Panels include one 4.7K UL listed resistor for each IDC and NAC)

EOL3.6-1.1	**Required UL listed End of Line Resistors – One 3.6K Ohm and one 1.1K Ohm. One required for each IDC configured as combination waterflow and supervisory.**

Expander Transformer (for the 10-zone panel only)

F-XTR120	Expander Transformer - doubles the NAC power supply capacity from 3.5 amps to 7.0 amps.

Off Premises Communications

F-DACT	Upload/download digital Communicator/modem/LCD module (Mounts in control panel)
CTM	City Tie Module (Requires 4" square or 2-gang North American electrical box)
RPM	Reverse Polarity Module (Requires MFC-A or other listed fire alarm enclosure)

FSRSI

FSRZI-A

FSRA10

Remote Annunciation, Data Sheet S85005-0126

FSRSI	Remote System Indicator – Includes LEDs for display of Power, Alarm, Supervisory, Trouble and Ground Fault, trouble sounder and silence/lamp test switch. Single gang trim plate included, multi-gang plates ordered separately. Mounts in a single or multi-gang North American electrical box.
FSRZI-A	Remote Zone Indicator – Includes red LEDs for five IDCs. Single gang trim plate included, multi-gang plates ordered separately. Mounts in single or multi-gang North American electrical box.
FSRZI-SA	Remote Zone Indicator – Includes LEDs for five IDCs. Single gang trim plate included, multi-gang plates ordered separately. Mounts in single or multi-gang North American electrical box. Jumper selected Alarm (red) or Supervisory (amber) indications.
FSRA10	Single Unit 10 zone remote annunciator for E-FSC1004, White
FSRA10C	Single Unit 10 zone remote annunciator for E-FSC1004, White (with common controls)
FSUIM	Graphic Driver/Interface - 9 relays and 5 switch inputs for common system indicators and control functions

Remote Relay Module, Data Sheet S85005-0126

FSRRM24	Remote Relay Module – Five Form C relays. Configurable for 1:1 operation with IDCs 1-5 or 6-10, matrix operation, or common system activation. Requires MFC-A or other listed fire alarm enclosure.
FSRRM-S11	11" Mounting track. Holds up to 4 FSRRM24s.

Mounting Accessories, Data Sheet S85005-0126

FSAT1	Annunciator Trim Plate, 1 gang, White. (Used with one FSRSI or FSRZI module.)
FSAT2	Annunciator Trim Plate, 2 gang, White. (Used with two FSRSI & FSRZI modules.)
FSAT3	Annunciator Trim Plate, 3 gang, White. (Used with three FSRSI & FSRZI modules.)
MFC-A	Multi-function Cabinet, red. Used for devices requiring a UL listed fire alarm accessory enclosure, such as RPM, FSUIM, FSRRM24

Power Supplies

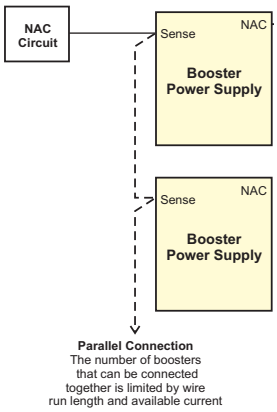
Remote Booster Power Supply

The Remote Booster Power Supply is a self-contained 24 Vdc power supply designed to augment fire alarm audible and visual power requirements as well as provide power for auxiliary, access control and security applications. The booster contains all of the necessary circuits to monitor and charge batteries, control and supervise four Class B or two Class A NAC circuits and monitor two controlling inputs from external sources.

Simple switch selection provides a wide variety of operational configurations. Each remote booster power supply is supplied with its own enclosure providing ample space for additional interface modules and battery compartment. Will fit up to two 12V10A 11 amp hour batteries in cabinet.

When used with Genesis Notification appliances, the booster provides the ability to synchronize strobes as well as horn signals. The booster flexibility allows synchronization with upstream devices, or, the booster may be used to synchronize downstream devices, as well as other boosters and their connected devices.

BPS notification appliance circuits easily configure for either of two signaling rates: temporal 3 or continuous. This makes the BPS ideal for applications requiring signaling rates not available from the main panel. It also allows independent setup of a notification appliance circuit without interfering with the main panel and its initiating circuits. In addition to the generated signal rates, the BPS can also be configured to follow the signal rate of the main panel's notification appliance circuit. This allows seamless expansion of existing NACs.



EBPS6A	6.5 Amp Booster Power Supply	Data Sheet S85005-0125
EBPS10A	10 Amp Booster Power Supply	Data Sheet S85005-0125

Batteries and Battery Cabinets

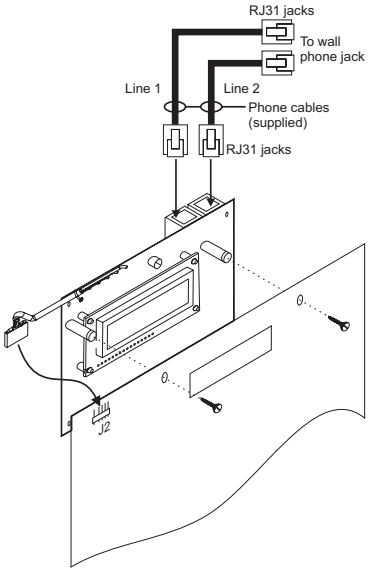
Accessories for Conventional and Addressable Panels



F-DACT dual line upload/download digital fire alarm communicator (for conventional panels only)

The F-DACT dialer is a multifunction module that provides communications, modem capability, and LCD display functions. Primarily a Digital Alarm Communicator Transmitter (DACT), it transmits event messages to a Digital Alarm Communicator Receiver (DACR) at a monitoring facility. The monitoring facility then notifies the fire department and other responsible parties of the event. Programmable options include split or dual reporting to two DACRs.

The DACT module can also be used as a modem to connect the panel to remote computers for uploading and downloading of configuration data (programming), panel status and event history. For security, the modem can be configured to accept programming on incoming calls or it can be required to call a preprogrammed number before accepting downloads and sending uploads.

The DACT module can be configured to work as all of the above, or as only an LCD display or LCD display and modem. It can be ordered separately or as part of the panel configuration by including a “D” in the panel part number.

F-DACT	**Upload/dowload digital fire alarm (mounts in control panel)**	**Data Sheet S85005-0126**

City Tie Module

The City Tie Module provides a simple way of connecting S to a local energy fire alarm box or City Master Box. One CTM provides either supervisory or alarm signaling. To configure both supervisory and alarm signaling, two City Tie modules are required. Each CTM connects to either a dedicated NAC on the panel or a dedicated NAC module.

CTM	**City Tie Module**	**Data Sheet S85005-0131**

Reverse Polarity Module

Provides three reverse polarity transmitters: one for system common alarm; one for system common trouble; and, one for system common supervisory.

RPM	**Reverse Polarity Module**	**Data Sheet S85005-0097**

Desktop Serial Printer (for addressable panels only)

The PT-1 series printers are high-speed, nine-pin dot matrix type. It is used to permanently record life safety system changes of state. All printed entries contain the date, time, event type and a user-defined message for each printed event. The printer is required in proprietary systems and requires a backup UPS power source. In auxiliary, local, or remote station systems, the printer is optional. Requires the SA-232 module.

PT-1S	**Serial Printer**	**Data Sheet S270020**

Edwards

Intelligent Addressable Devices

Edwards brand intelligent addressable detectors are meticulously engineered to deliver high-performance features, superb reliability, and unbeatable quality. With their highly stable design, these detectors resist air movement caused by heating and air conditioning, making them reliable performers ideally suited to modern building interiors.

The installation and maintenance advantages of Edwards intelligent addressable detectors add value throughout their service life. The twist-and-lock design makes short work of installation and maintenance operations. A plastic breakout on the detector housing optionally prevents removal from the base except with a special tool.

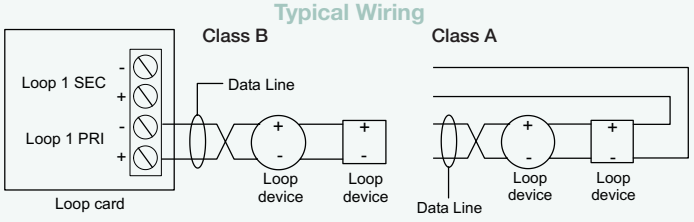
A bright, dual color LED flashes red when the detector is in alarm, and green for normal polling, thus eliminating much of the guesswork when responding to front-panel indications.

Device loop

The E-FSA64 control panel provides one device loop circuit that supports 64 addresses. The E-FSA250 panel supports 127 addresses and can be expanded to provide a second loop of 127 addresses by means of the XAL127 SLC loop expansion module for a panel maximum of 254 addresses. All loop circuits are supervised for opens, shorts, and grounds. All addresses can be used for any device type maximizing loop flexibility.

Circuit specifications	
Device loops	
E-FSA64	1 loop, supports up to 64 addresses, Class B or Class A
E-FSA250	1 loop, supports up to 127 addresses, Class B or Class A Optional 2nd loop supports up to 127 additional addresses, Class B or Class A

Typical Wiring



See page 4 for details concerning the XAL127 Loop Expansion Module.

All detectors feature comprehensive self-diagnostic capability. E-PD and E-PHD photoelectric detectors continuously adjust their sensitivity to compensate for changes in the environment such as the presence of dirt, smoke, temperature, and humidity. These detectors are factory set to issue a dirty sensor warning when they reach 80% of their compensation limit and a trouble condition when they reach 100%. The Edwards intelligent panel allows you to adjust the sensitivity settings during programming to meet the needs of the application.

Standard Features

- Photoelectric smoke detector, Photoelectric smoke & heat detector, and heat detectors available
- Compatible with standard, relay, isolator, and audible bases
- Field replaceable photoelectric chamber
- Simple rotary address setting
- Bases mount to standard North American two-gang or 4" square electrical boxes
- Dual color LED to differentiate between normal and alarm
- Tamper-resistant twist-and-lock installation feature
- Self diagnostic capability with on-board storage of results
- Factory-set to continuously adjust sensitivity to compensate for changes in the environment such as the presence of dirt, smoke, temperature, and humidity
- Manufactured to strict international ISO 9001 standards
- Assembled using surface mount technology for RF resistance
- Conformally coated components resist dust and humidity
- Automatic detector test
- Low profile detector and module design
- Panel is able to identify address of modules with ground fault on supervised field wiring
- Large selection of module types
- Module personality selection allows detailed information at panel and monitoring facility
- Command decisions are made at the module or detector decreasing response time
- Reuse existing, code compliant, electrically sound, untwisted, twisted or shielded wire

Detectors

E-PHD

E-PD

Photoelectric and combination detectors

Edwards photoelectric detectors continuously adjust their sensitivity based on fluctuating environmental conditions such as the presence of dirt, smoke, humidity, or changes in temperature, and notifies the panel of any changes in sensor sensitivity. When the detector has adjusted its sensitivity to its maximum limit, it issues a dirty sensor warning, allowing enough of a margin for maintenance personnel to clean the detector before it goes into trouble condition. These detectors perform comprehensive self-diagnostics and store these details in their on-board memory.

Photoelectric Smoke Detector

E-PD Photoelectric Smoke Detector uses an optical sensing chamber to detect smoke. The detector analyzes data gathered by the sensor to determine when an alarm is initiated. Thanks to its high-performance photoelectric sensing chamber, the E-PD responds quickly and reliably to a wide range of fire types, especially slow burning fires fuelled by combustibles typically found in modern multi-use buildings.

E-PD	**Intelligent/Addressable Photoelectric Smoke Detector (Base sold separately)**	**Data Sheet S85001-0592**

Photoelectric/Fixed Temperature Detector

E-PHD Photoelectric/Fixed Temperature Detector houses a photoelectric sensing chamber that detects smoke, as well as a fixed-temperature sensor that detects heat.

E-PHD	**Intelligent/Addressable Photoelectric Smoke/Heat Detector (Base sold separately)**	**Data Sheet S85001-0592**

Heat Detectors

Thanks to advanced thermistor technology, Edwards heat detectors are ideal for sensing fast, flaming fires and for applications where smoke detection is inappropriate. They are particularly well suited for areas such as kitchens or harsh environments where the normal presence of smoke or dirt can cause smoke detectors to false alarm. These heat detectors are capable of performing comprehensive self-diagnostics and storing the results.

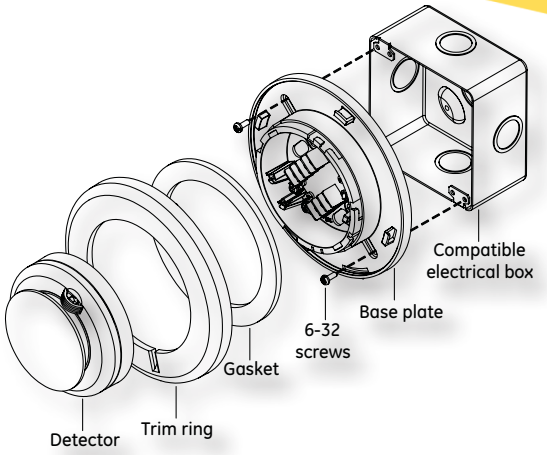
E-HD

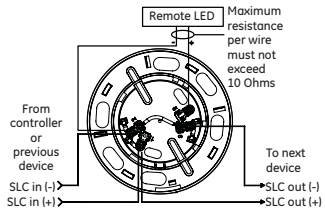
Fixed Temperature Heat or Rate-of-Rise Detector

E-HD Heat Detector is programmable as either a 135°F (57°C) fixed-temperature or 15°F (-9°C) degree per minute rate of rise heat sensor for the detection of heat due to fire. The heat sensor monitors the temperature of the air and determines whether an alarm should be initiated.

E-HD	**Intelligent/Addressable Heat Detector (Base sold separately)**	**Data Sheet S85001-0592**

Addressable Detector Bases

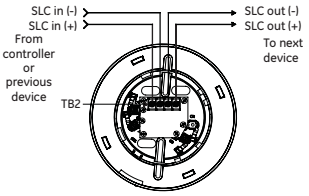




B4U Standard Base for Intelligent Addressable Detectors

The B4U Standard Detector Base features twist-and-lock detector installation and is compatible with Edwards Intelligent detectors. The base does not require a separate address because it shares the address of the device it is connected to.

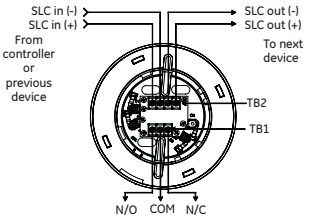
B4U	**Standard Base**	**Data Sheet S85001-0592**



IB4U Isolator Detector Base for Intelligent Addressable Detectors

The IB4U Isolator Detector Base is designed to prevent an entire Class A communications loop from being disabled when a short circuit occurs. This is accomplished by isolating the part of the loop containing the short from the remainder of the circuit.

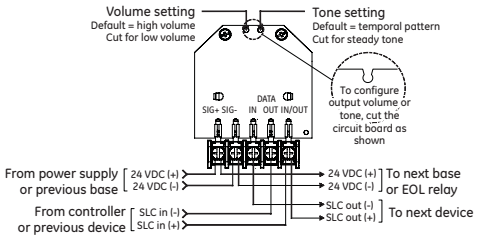
IB4U	**Isolator Detector Base**	**Data Sheet S85001-0592**



RB4U Relay Detector Base for Intelligent Addressable Detectors

The RB4U Relay Detector Base is designed to add relay functionality to the listed compatible detectors. Form C relay contacts are included for the control of appliances such as door closers, fans, dampers, etc. Relay bases may be configured for operation independent of the detector connected to the base.

RB4U	**Relay Detector Base**	**Data Sheet S85001-0592**



SB4U Audible (Sounder) Detector Base for Intelligent Addressable Detectors

The SB4U is designed to add an audible output function to compatible detectors. The base can operate as an independent local alarm, or as part of a zone or system alarm with synchronized audible output. The SB4U is field-configurable for output tone (steady or temporal) and output volume (low dBA or high dBA). The base must be connected to a continuous voltage whether the output tone is set to steady or temporal. The base does not require a separate address; it shares the address of the device it is connected to.

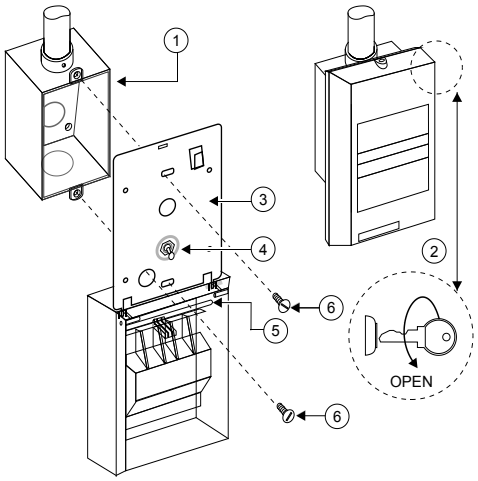
SB4U	**Audible (Sounder) Detector Base**	**Data Sheet S85001-0592**

Accessories

AB4G-SB	**Surface Box for Audible Base**	**Data Sheet S85001-0592**
R-LED	**Remote alarm LED. Use with standard base only.**	**Data Sheet S85001-0592**
211-10PKG	**Replaceable smoke det. optical chamber for E Series detectors; 10-Pack**	**Data Sheet S85001-0592**

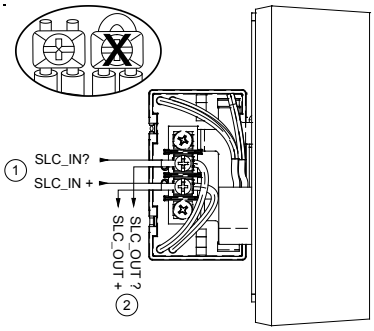
Note: 211-10PKG replaceable optical chamber is not compatible with the SuperDuct duct detector, optical beam detectors, and other smoke detectors not listed in description

211 Optica



Manual Pull Stations

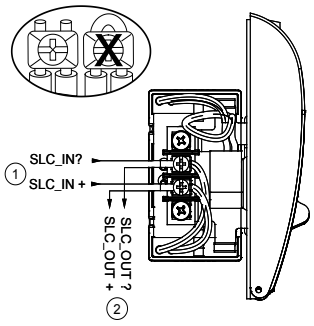
A single input mini module mounted on the back of the unit (factory installed) supervises the station and sends an alarm signal to the control panel when the switch is closed (i.e. when the handle is pulled). The device address is set using the two rotary switches located on the back of the unit. One device address is required. The pull station is configured for alarm latching operation. When the pull lever is activated, an alarm signal is sent to the control panel and the alarm condition is latched at the pull station.



Addressable Double Action Pull Stations

The double action, single stage E-278 station is a contemporary style manual station made from durable red LEXAN. To initiate an alarm, first lift the upper door, then pull the alarm handle.

E-278	Double Action Fire Pull Station, Addressable, key reset	Data Sheet S85001-0612
276B-RSB	Surface Mount Box, Red — 278 series/E-278	Data Sheet S85001-0612
276-GLR	20 Break-rods — for 278 series, 20 Count	Data Sheet S85001-0612



Addressable Single Action Pull Stations

E-270 series manual pull stations are made from die-cast zinc and finished with red epoxy powder-coat paint. With positive pull-lever operation, one pull on the station handle breaks the rod and turns in a positive alarm.

Conventional Initiating Devices

521B Smoke Detector

500 Series Smoke Detectors

Edwards brand 500 Series two-wire conventional photoelectric smoke detectors bring together trusted technology and a full line of features that meet the demands of every type of application. The 500 offers sounder models in two-wire applications, specifically to meet residential occupancy code requirements. The 500 Series also offers choices for optional auxiliary relays and isolated heat sensors.

Edwards is also proud to offer proven technology like CleanMe®, drift compensation, field replaceable optical chambers, and self-diagnostics. CleanMe® is only available on the 521 2-wire models and will communicate to the Edwards panels when servicing is required.

500 Series detectors work on a light-scattering principle. A pulsed infrared light-emitting diode serves as the light source, and a high-speed photo diode as the sensing element. This design has superior protection against nuisance alarms caused by dust, insects, RF interference, and ambient light.

The proprietary optical chamber is field replaceable. In the event of a confirmed alarm the LED will light continuously. The unit indicates trouble by flashing the LED every second. This meets the NFPA 72 field sensitivity testing requirements.

Units with built-in 85dBA sounders emit a temporal 3 tone pattern when in alarm and will emit a steady tone when the input power is reversed. All wiring terminates in clamp-type screw terminals. The detectors mount to a standard single-gang electrical box, a four-inch octagonal, four-inch square electrical box, or WIREMOLD(T) No. 5739 fixture box.

Standard Features

- CleanMe® remote maintenance reporting (521 models) and built-in drift compensation reduces false alarms
- Self-diagnostics eliminates the need for external meters
- Field-replaceable optical chamber makes service fast and simple
- Small, low profile design blends with any environment
- Optional auxiliary functions include:
  - Integral sounder
  - Fixed/Rate-of-Rise heats
  - Auxiliary relay

Detector Options Key
N = Detector includes optional function
B = 6-33VDC operation
C = 8.5-33VDC operation
R = Auxiliary relay
S = 85dBa sounder
XT = Rate-of-rise and fixed temp sensors

Two-Wire Models

511C	Photoelectric 2-Wire Smoke Detector, 12/24VDC. Not Listed MEA. S09A, S10A compatible	Data Sheet S85001-0595

521NCSXT	Photoelectric 2-Wire Smoke Detector w/CleanMe, Heat Sensor and Sounder, 12/24VDC.	Data Sheet S85001-0606

700 Series Smoke Detectors

The 700 Series smoke detectors are the industry's first conventional self-diagnostic detectors specifically designed for the demands of commercial and industrial environments. If the detector drifts out of its UL Listed sensitivity range or fails internal diagnostics, the alarm LED flashes once a second to indicate trouble. This meets NFPA 72 field sensitivity testing requirements without the need for external meters.

The 700 series photoelectric smoke detector is an interchangeable head and base detector with a light-scattering optical sensor that provides outstanding stability and excellent response to a wide range of fires. The TS7 Series includes both the smoke detector head and base with SEM terminals packaged together.

Additional diagnostic information is activated by applying a magnet near the detector's integral reed switch. This initiates a self-diagnostic routine and provides visual indication of sensitivity level, or if service is required. The magnet test causes the LED to blink. The number of blink counts corresponds to a smoke detector sensitivity range.

And, if they become dirty over time, the 700 Series detectors automatically adjust the alarm threshold through built-in drift compensation.

Standard Features

- Self-diagnostic capability continually monitors operation
- Automatic drift compensation
- Field-replaceable optical chamber
- Low-profile design blends into the ceiling
- Advanced nuisance alarm immunity
- Extensive two-wire compatibility listings

TS7-2

Detectors with Packaged Bases: 2-Wire Conventional Smoke Detectors

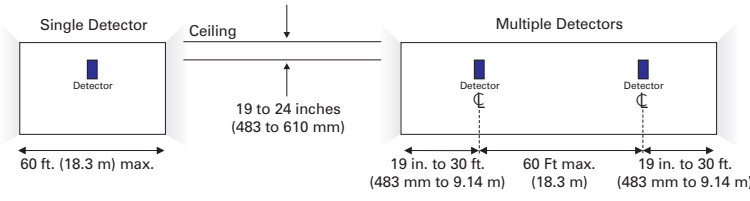
702U	6" Universal Mounting Base, 700 Series, 6 Terminals for All Heads

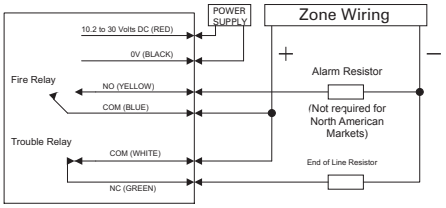
Beam Smoke Detectors

EC Series Reflective Beam Smoke Detector

EC Series Reflective Beam Smoke Detectors comprise a transmitter and receiver in a single enclosure. The transmitter emits an invisible infrared light beam that is reflected via a prism mounted directly opposite and with a clear line of sight. Depending on the detector model, the prism can be mounted up to 160 feet – or as far away as 330 feet – from transmitter/receiver unit, and provide a protected area up to 60 feet wide.

This large protected swath makes EC Reflective Beam smoke detectors ideal for open areas such as warehouses, hotel atriums, industrial plants, and school gymnasiums. They are also invaluable in shopping malls, libraries, theatres and churches, where servicing traditional detectors can be difficult. Optional key-operated ground-level test stations allow remote detector testing from a safe location.





EC-50R	EC-50R Reflective Beam Smoke Detector, test filter, one reflector	Data Sheet S85001-0560
EC-100R	EC-100R Reflective Beam Smoke Detector, test filter, four reflectors	Data Sheet S85001-0560
EC-LLT	Ground Level Test Station	Data Sheet S85001-0560

Heat Detectors

Single Pole Heat Detectors

280B-PL

Edwards conventional heat detectors provide high quality, reliability, and the ultimate in design and decor. The low silhouette and pure white finish blends with most ceiling styles to provide an inconspicuous unit. Heat Detectors are available with 135°F, 194°F or 200°F ratings for fixed temperature, or combination rate-of-rise and fixed temperature operation. Both single pole and double pole models are available.

Rate-of-rise operation: a temperature increase at the detector of 15°F or more per minute activates the rate-of-rise feature. This closes the contacts in the detector to transmit the alarm condition to the fire alarm control panel. When the rate-of-rise element alone has been activated, the detector is self-restoring.

Fixed temperature operation: if the temperature of the center disk rises to the detector's rated temperature, the fixed temperature element activates. this closes contacts in the detector and transmits an alarm condition to the fire alarm control panel. The fixed temperature element is non-restorable and, when activated, the detector must be replaced. The need for replacement is indicated when the center disk has fallen free from the detector.

Note: Standard Plastic Mounting Plate Included with Each Heat Detector

281B-PL	**Heat Detector, 135°F, combination rate-of-rise & fixed temperature**	**Data Sheet S85001-0261**

280A-PL	**Reversible Plastic Mounting Plate, White, for 280 Series Detectors**	**Data Sheet S85001-0261**

Double Pole Heat Detectors

CR-CF

CR/CF Series Heat Detectors offer fixed temperature or combination rate-of-rise and fixed temperature detection.

Rate-of-rise operation: a temperature increase at the sensor of 15°F (9°C) or more per minute activates the rate-of-rise feature. This closes the contacts in the sensor to transmit the alarm condition to the fire alarm control panel. When the rate-of-rise element alone has been activated, the sensor is self-restoring.

Fixed temperature operation: if the temperature of the center disk rises to the sensor's rated temperature, the fixed temperature element activates. This closes contacts in the sensor and transmits an alarm condition to the fire alarm control panel. The fixed temperature element is non-restorable and, when activated, the detector must be replaced. The need for replacement is indicated when the center disk has fallen free from the detector.

CR200-2	**Heat Detector, 200°F (93°C), combination rate-of-rise & fixed temperature**	**Data Sheet S85001-0367**
CF135-2	**Heat Detector, 135°F (57°C), fixed temperature only**	**Data Sheet S85001-0367**
CF200-2	**Heat Detector, 200°F (93°C), fixed temperature only**	**Data Sheet S85001-0367**

Conventional Manual Stations

Manual Pull Stations - Single Action Metal

The 270 Series non-coded fire alarm conventional pull stations are sturdy, attractive, and designed for economical installation. 270 Series provide a single action, break glass initiating station. It is available with normally open, normally closed or combination NO/NC contacts. 270 Series have screw terminals for field connection. 270A Series have 6-inch wire leads.

☐ 270-SPO (w/ terminals)	☐ 270A-SPO (w/ wire leads)	Single-action pull station, single normally open	Data Sheet S85001-0303
☐ 270-DPO (w/ terminals)	☐ 270A-DPO (w/ wire leads)	Single action pull station, double normally open	Data Sheet S85001-0303

Manual Pull Stations - Single/Double Action Lexan®

276B/277B Series non-coded fire alarm stations are contemporary styled Lexan stations that are flexibly designed to meet a wide variety of application requirements and operational sequences.

- 276B Series are single action stations with terminals for field wiring connections.
- 277B Series are also single action stations but use 6” wire leads for field wiring connections.
- 278B Series are double action stations with terminals for field wiring connections.
- 279B Series are double action stations with 6” wire leads for field wiring connections.

Available with single or double pole alarm contacts that can be normally open, normally closed or a combination of both. Either a key or tool (depending on station selected) is required to reset pull station.

Harsh Environment Manual Stations

Weatherproof Manual Stations

MPSR Series manual pull stations are noncoded fire alarm stations solidly constructed of die-cast material. All components are pre-painted or have plated surfaces to inhibit corrosion. MPSR Series manual pull stations are weatherproof and rated for outdoor use. Single- and double-action MPSR models are available with either single pole (normally open) or double pole (double throw) alarm contacts. Depending on the model, access to the unit for resetting purposes is gained with either a keylock or hex screw. All models feature terminals for wire connection.

Single Action Stations (weatherproof backbox included)

MPSR1-SHTW-GE	SPST, hex screw reset, terminal connections.	Data Sheet S85001-0588

27193-16	Pull Station Accessory, 1-gang Surface Mount Box, White

Hazardous Location Fire Alarm Manual Station

The MPSR1-D45WX-GE is an extremely rugged fire alarm station suitable for hazardous locations. The MPSR1-D45WX-GE is a single action station that can be converted to a double-action by adding a MPSR-LP.

MPSR1-D45WX-GE	Single-action, DPDT, Cat 45 Key reset, terminal connections	Data Sheet S85001-0588

Genesis Series

Wall Strobes, Horns & Chimes

The Genesis line of signals are among the smallest, most compact audible-visible emergency signaling devices in the world. About the size of a deck of playing cards, these devices are designed to blend with any decor. They feature textured housings in architecturally neutral white or traditional fire red. An ingenious iconographic symbol indicates the purpose of the device. This universal symbol is code-compliant and is easily recognized by all building occupants regardless of what language they speak. Models with "FIRE" markings are also available.

Signals can be synchronized when connected to Edwards E-FSC and E-FSA fire panels, EBPS booster supplies, or with the use of EG1M(-RM) synch modules.

Genesis Wall Strobes

Genesis wall strobes offer 15 to 110 candela output, which is selectable with a conveniently-located switch on the side of the device. The candela output setting remains clearly visible even after final installation, yet it stays locked in place to prevent unauthorized tampering.

EG1-VM	Strobe, wall mt., 15-110 CD, 24VDC, white	Data Sheet S85001-0573
EG1R-VM	Strobe, wall mt., 15-110 CD, 24VDC, red	Data Sheet S85001-0573

EG1RF-VM	Strobe, wall mt., 15-110 CD, Marked "Fire", 24VDC, red	Data Sheet S85001-0573

Genesis Horns and Horn-strobes

Genesis Horns and Horn-strobes reach output levels as high as 99 dB and features a unique multiple frequency tone that results in excellent wall penetration and an unmistakable warning of danger. Horns may be configured for either coded or non-coded signal circuits. They can also be set for low dB output with a jumper cut that reduces horn output by about 5 dB.

EG1-HDVM	Horn/Strobe, wall mt., 15-110 CD, 24VDC, white	Data Sheet S85001-0573

EG1RF-P	Horn, steady, Marked "Fire", 24VDC, Red	Data Sheet S85001-0573

Genesis Chimes and Chime-strobes

Genesis chimes and chime-strobes produce a pleasing mellow tone. When steady (non-stroked) voltage is applied, the chime automatically pulses at 60 strokes per minute, or may be field-configured for temporal output. When installed with an EG1M Signal Master Module, the chime may also be field-configured for coded operation, which enables the chime output to match the rate that voltage is applied to the circuit. The chime's 79 dBA (peak) output level makes this device suitable for many applications. Chimes may be set for low dB output with a jumper cut that reduces sound output by about 5 dB.

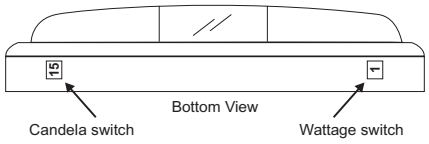
Genesis Series

Wall Speakers and Speaker-strobes

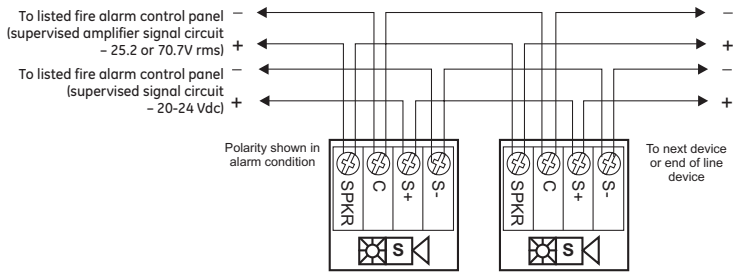
Genesis speakers include a DC blocking capacitor to allow electrical supervision of the audio distribution circuit. Models for 25 V_{RMS} and 70 V_{RMS} circuits are available. The mylar speaker with its sealed back construction provides extra durability and improved audibility. ¼ W to 2 W operation is selectable with a conveniently-located switch on the bottom of the device. They are compatible with standard 4-inch (10 cm) square electrical boxes and don't require extension rings or trim plates. No mounting screws are visible when the unit is installed, providing a clean, finished, unobtrusive appearance that blends with any decor.

Speaker-strobes feature 15, 30, 75 or 110 candela output, selectable with a conveniently-located switch on the bottom of the device. Strobes can by synchronized when connected to Edwards E-FSC and E-FSA fire panels, EBPS booster supplies, or EG1M-RM sync module



Candela and wattage settings remain clearly visible even after final installation.

#18 - #12 AWG terminals – ideal for long runs, existing wiring



Genesis speakers are available with white or red housings and with or without FIRE markings.

Ceiling Speakers, Horns, and Strobes

Select 15/30/75/95 and 95/115/150/177 candela output!

Select ¼, ½, 1, or 2 watt operation!

The Genesis line of multi-candela and multi-wattage ceiling signals feature all the hallmarks that have made Genesis products a big hit with designers, engineers, building owners, and installers everywhere. The Genesis exclusive FullLight technology, precision timing electronics, and low current draw bring the benefits of the popular Genesis wall-mount models to ceiling applications. Up to 30 percent slimmer than comparable signals on the market, they are compatible with standard 4-inch (10 cm) square electrical boxes and don't require extension rings or trim plates. No mounting screws are visible when the unit is installed, providing a clean, finished, unobtrusive appearance that blends with any decor. These signals are also listed for wall mount applications. Strobes can be synchronized when connected to Edwards E-FSC and E-FSA fire panels, EBPS booster supplies, and EG1M-RM remote synch module.

White Field configurable Speaker-Strobes may be ordered with or without "FIRE" marking. Red Speaker-Strobes come with "FIRE" marking.

All speakers feature selectable ¼, ½, 1, or 2 watt operation. All horns feature high or low dB output.
Multi-Candela Strobes feature 15, 30, 75, or 95 candela output. Multi High-Candela Strobes feature 95, 115, 150, or 177 candela output.

Signal Master /Synchronization Module

The Signal Master is a simple-to-use accessory that adds enhanced features to Genesis strobes, speaker strobes and horn-strobes. It is a dual-purpose module that provides UL 1971 required precision synchronization for connected Genesis strobes, and independent control for connected Genesis horns over a single pair of wires. Two methods of horn control are available: traditional horn silence; or, normally-closed contact. Both methods may be used to silence horns without turning off strobes on the same circuit. Two models are available. The Genesis "piggyback" model doesn't require a separate electrical box. It simply snaps to the back of the first EG1 signal on the circuit. The remote mount model mounts in a North American 2½ inch (64 mm) deep one-gang box. Edwards panels and power boosters provide the same functionality as the Signal Master when Genesis Mode is enabled. Synchronization modules must be listed as compatible to the panels.

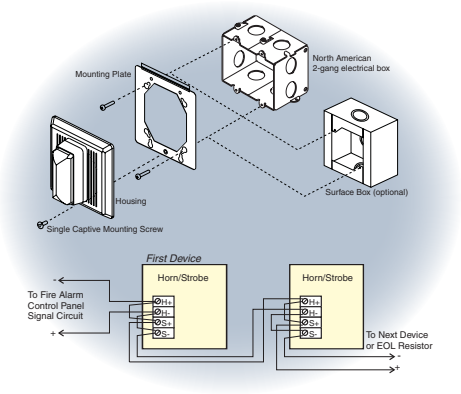
Snap-on (piggyback) model

Remote 1-gang mount model

EG1M	Genesis Signal Master – Snap-on (piggyback), 2 amp max.	Data Sheet S85001-0545
EG1M-RM	Genesis Signal Master – Remote 1-gang mount, 2 amp max.	Data Sheet S85001-0545

Enhanced Signals

Weatherproof Signals



All Enhanced Integrity devices are UL 1971 listed for both wall and ceiling orientation. Enhanced Integrity strobes meet the latest UL1971 synchronization requirements when used with compatible Edwards panels or the EG1M-RM Signal Master. Integrity devices are shipped with wall mount style “FIRE” lens markings. Other lens markings are available.

Weatherproof Horns and Horn-Strobes

During installation, the Horn is configured for steady or temporal tone signal. When temporal output is selected, all Horns on a common two-wire circuit are self-synchronized. Integrity Series Horns emit a low frequency “growling” tone that demands attention. Horns can be configured for either high output (98 dBA) or low output (94 dBA); and are listed for outdoor use. (Order weatherproof mounting box separately.)

Important Note: *2459-WPB-R back box must be specified and ordered separately for weather-proof rating*

Weatherproof Strobe

CS405 Series strobes are weatherproof devices specially designed for use with compatible life safety communication and control equipment to alert the hearing impaired of a life safety event. Strobes are available with 15/75 cd effective flash intensity. They are fully compatible with Genesis signals.

CS405 Series strobes exceed UL synchronization requirements (within 10 milliseconds other over a two-hour period) when used with a compatible synchronization source. The flash from 405 Series strobes can be noticed from almost any position in the room, corridor, or large open space. 405 Series strobes are UL 1971 listed with both wall and ceiling cd intensity ratings (see Specifications). This is useful in areas where the Authority Having Jurisdiction (AHJ) permits ceiling-mount strobes. 405 Series strobes are designed for 16 to 33 Vdc operation and must be connected to signal circuits that output a constant (not pulsed) voltage. A diode is used to allow full signal circuit supervision and polarized connections are made to terminals that accept up to #12 AWG (2.5mm²) wire. The strobe front plate is of steel construction finished with durable baked epoxy polyester powder-coat paint.

Hazardous Location Horns & Strobes

Hazardous Location Strobes

- Class I, Division 1, Groups C and D;
- Class I, Division 2 Groups A, B, C, and D;
- Class II, Division 1, Groups E, F, and G;
- Class II, Division 2, Groups F and G;
- Class III, Division 1 and 2

116DEGEX-FJ hazardous location strobes are in-rush current limited life safety signaling appliances designed for installation in hazardous environments. Rigid specifications and state-of-the-art technology provide for high visual output and low maintenance. When pendant, wall or ceiling mounted, the 116DEGEX-FJ meets or exceeds the requirements of UL 1971 Signaling Appliance for the Hearing Impaired. Rated for 125 candela ceiling mount, 60 candela wall mount.

Note: Can be synchronized when connected to compatible Edwards fire panel or booster power supply, or with EG1M-RM synch module.

Hazardous Location Horns

- Class I groups B, C and D locations
- Class III hazardous locations, for Divisions 1 and 2
- Class II groups E, F and G locations

888D and 889D hazardous location horns are diode-polarized, heavy duty, high decibel vibrating horns intended for use in life safety systems in hazardous (classified) indoor locations. These horns may be mounted to any solid surface using two bolts. Each unit is supplied with a sealing fitting for a 3/4 inch -14 National Pipe Taper (NPT) nipple, and wire leads for the electrical connection to the life safety system notification appliance circuit.

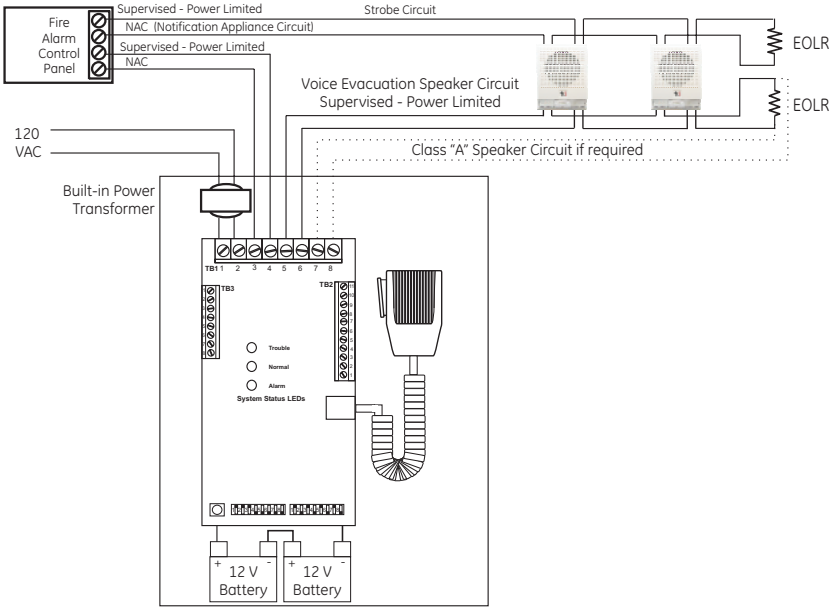
Audio Notification System

The ANS series of products from Edwards are high-performance audio notification systems that provide voice evacuation capability that meet the Emergency Voice Alarm requirements of NFPA 72 for UL listed fire alarm applications. ANS panels, which are available in 25, 50, or 100 Watt models, include an amplifier, tone generator, digital message repeater (DMR), and supervisory interface.

These self-contained systems offer robust field-configurable features and are supported by a wide range of accessory equipment that provides application flexibility and reliable performance for new and retrofit installations alike. Expander panels and modules extend the range of the ANS system to meet the needs of even the most demanding audio applications, while accessory equipment such as zone switchers and remote microphones offer the sophistication of high-end systems for a relatively low cost.



Audio Notification Panels

Panels include DMR, temporal pattern, standard message, microphone, power supply and battery charger.
